NIFL successfully install over 250m² of 6mm Rhine Gold Addaset Resin Bound @ 18mm thickness

NIFL rise to the challenge and effectively install Addaset Resin Bound Surfacing in adverse conditions with completion just before nightfall!

First stage of this complex installation was to remove the timber decking and patch the supporting concrete sub-base.

NIFL then supplied and installed an 18x18mm stainless steel edging strip to the edge of the marina. This provides a neat finish to the edging of the Addaset surfacing and supports the resin at the edge of the marina.

Weather conditions were not ideal and recent rainfall left the substrate unsuitable for the installation. NIFL quickly rose to the challenge and used local FERFA registered company PPC to supply the turbo dryer. NIFL split into two teams and as one team dried the substrate with the turbo dryer the others followed closely behind installing the Addaset Resin Bound Surfacing.

Against all odds NIFL made a supreme effort and ensured the Addaset Resin Surfacing was completed in time for end of the day and the return of additional rainfall.
