Another Successful Installation...

## NIFL Resin Flooring Installs Pumadur SL to new Health Care Facility

**NIFL Resin Flooring installed over 500m<sup>2</sup> of Pumadur SL and Pumadur HF, manufactured by Resdev, to a new Health Care Facility in Uxbridge, Middlesex, on behalf of a global contract logistics company, founded in 1890.**

NIFL Resin Flooring installed over 500m<sup>2</sup> of Pumadur SL, which is a FeRFA Type 5 resin flooring system to the main area of the facility, and 50m<sup>2</sup> of Pumadur HF, which is a FeRFA Type 8 resin flooring system to the cold store.

The installation also included the application of a cementitious polymer screed in order to provide a suitable surface for the existing resin, the installation of 20 Lin m of kerbs including seal coat and over 100 Lin m of expansion joints to allow for movements in the resin system.

Chelsea Blue was chosen for the colour to provide a highly attractive matt finish to the area. NIFL Resin Flooring has now installed over 300,000m<sup>2</sup> of similar systems throughout the UK.
