## NIFL Installs Flowfresh HF by Flowcrete...

**NIFL successfully installed 3,000m<sup>2</sup> of anti-microbial Polyurethane Resin to 12 incubation units in Hull.**

An **ultra hygienic, hard wearing floor** was needed for a series of brand new incubation units to conform to health and safety standards. The units needed an **anti slip floor coating for extra safety and protection.**

NIFL chose Flowfresh HF because it is a heavy duty, chemical resistant antimicrobial treated polyurethane resin floor screed which contains Polygiene, a silver ion microbial additive.

NIFL Resin Flooring was chosen to install the system as a result of an 18 year long relationship with the food industry which has led to NIFL installing a long series food safe resin flooring installations.

Nearly 3,000m<sup>2</sup> of 6mm Polyurethane Resin Flooring was installed to the units along with 2,000 Lin m of Heavy Duty Polyurethane Coving at various heights.

NIFL has its Head Office in Hull where the installation took place and a branch office in Nottingham. However, the company has operated very competitively nationwide over a number of years.
